INTRODUCTION

Level of Pollution has increased so high nowadays that discussions on pollution has become very important. When unwanted substances driven by human being added to the environment, the entire ecology gets contaminated and polluted. This does not only affect the humans but the other organisms too. The most common types of pollution include air, water, noise and soil pollution. Due to smoke that comes from industries, motor vehicles, fireworks, etc, air pollution is common in a city like Chennai. The industrial wastes and poisonous chemicals and other urban wastes including plastics goes into the river causing diseases like diarrhea, jaundice, typhoid etc. Our society as a whole is in need of an action to control pollution to which an awareness regarding the same is important.

OBJECTIVE

The objective of this project work is to make the student familiar with the ill effects of pollution. For this, each student was asked to observe the types of pollution prevailing in their locality and trace out its causes. Each student had come up with a report on what is the main type of pollution existing in their neighborhood. Since most of the students are from Chennai, air and noise pollution was found common in their reports.

OUTCOME:

Major areas in Chennai including Ennore, Koyambedu, Manali etc were covered by the students where noise and air pollution was found to be common. Due to improper drainage systems in few localities, soil pollution can also be seen in the river banks of Coovam. Other important cause of soil pollution was found to be littering.
