REPORT ON FIELD PROJECT

Field Project has been an integral component of college education in one form or the other. At present the concept, issues, and problems related to environment are either integrated with different disciplines or introduced as a subject. The importance for providing environmental orientation to education especially to our college students, has been organized. The aim of Field Project is to develop awareness of and concerned about the environment and its associated problems and which has the knowledge, Skills, attitudes, motivations and commitment to work individually and collectively towards solutions of current problems and prevention of new ones. In view of this aim, the department assigned Field projects to students in the form of Assignment, report writing and project submission to the students of second year under graduation.

The main objective of having the Field Project is to create

- Awareness: To help social groups and individuals acquire awareness of and sensitively to the total environment and it's allied problems.
- Knowledge: To help social groups and individuals gain a variety of experiences and acquire a basic understanding of environment and its associated problems.
- Attitudes: To help social groups and individuals acquire a set of values and feelings of concern for environment.
- Skills: To help the individuals in acquiring skills for identifying and solving environmental problems.
- Participation: To provide social groups and individuals with an opportunity to be actively involved at all levels in working towards the resolution of environmental problems.

I. CHOOSE THE CORRECT ANSWER:

1. b) biosphere
2. b) Stratosphere
3. c) Over-exploitation
4. a) Rivers
5. a) Economic Problem
6. a) International Union for Conservation of Nature
7. c) Threatened Species.
8. a) 10 kg.
9. c) Reduce, Reuse and Recycle
10. d) April 7.

II. ANSWER ANY 5:

11. An ecosystem is a community of living organisms in conjunction with the non-living components of their environment, interacting as a system. The biotic and abiotic components are linked together through nutrient cycles and energy flows.
12. Bio diversity is the biological variety and variability of life on earth. Bio diversity is a measure of variation at the genetic species and ecosystem level. Terrestrial biodiversity is usually greater near the equator, which is the result of warm climate and primary productivity.
13. The greenhouse effect is the process by which radiation from a planet's atmosphere warms the planet's surface to a temperature above what it could be without the atmosphere. Radiatively active gases in a planet's atmosphere radiate energy in all directions.
